Sequence 23087, Application US/10357930

Publication No. US20040259086A1

GENERAL INFORMATION:

APPLICANT: Schlegel. Robert

APPLICANT: Endege, Wilson

APPLICANT: Monahan, John

TITLE OF INVENTION: IDENTIFICATION, KITS, AND METHODS FOR

TITLE OF INVENTION: IDENTIFICATION, AND THERAPY OF

TITLE OF INVENTION: HUMAN PROSTATE CANCER

TITLE OF INVENTION: HUMAN PROSTATE CANCER

TITLE OF INVENTION: HUMAN PROSTATE CANCER

TITLE OF INVENTION: HUMAN PROSTATE

CURRENT APPLICATION NUMBER: 09/785, 276

Nuljin virus

Kunjin virus

Viruses; ssRNA positive-strand viruses, no DNA stage; Flaviviridae;

Flavivirus; Japanese encephalitis virus group.

1 (bases 1 to 587)

Poidinger, M., Hall, R.A. and Mackenzie, J.S.

Molecular characterization of the Japanese encephalitis serocomplex of the flavivirus genus

Virology 218 (2), 417-421 (1996)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Kunjin virus

Kunjin virus
Kunjin virus
Viruses; ssRNA positive-strand viruses, no DNA stage; Flaviviridae;
Flavivirus; Japanese encephalitis virus group.
1 (bases 1 to 627)
Coia,G., Parker,M.D., Speight,G., Byrne,M.E. and Westaway,E.G.
Nucleotide and complete amino acid sequences of Kunjin virus;
definitive gene order and characteristics of the virus-specified

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          encoded a single open reading frame for 3433 amino acide was obtained and compared with the complete amino acid sequences of yellow fever and west Nile viruses. Partial N-terminal amino acid analyses of KUN virus-specified proteins identified the polyprotein cleavage sites and the definitive gene order. Three stop codons in the correct reading frame occur within the first 25 nucleotides beyond the 3' end of the coding sequence.
KUNCG 10664 bp RNA linear VRL 17-FEB-1998 Kunjin virus gene for polyprotein (C, prM, E, NS1, NS2A, NS2B, NS3, NS4A, NS4B, NS5), complete cds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Viruses, seRNA positive-strand viruses, no DNA stage, Flaviviridae, Flavivirus; Japanese encephalitis virus group.
